Proposed project

Project Name: Online assessment module

Objectives:

Rila hosts a number of web sites and medical courses that use online assessment. Our existing module is in need of redesign and restructuring

Module needs to be able to host various test:
1. True False
2. Multiple Choice
3. Extended Matching Questions
4. Short Answer

Questions and results need to be integrated into existing web sites and old style test need to be converted in to the new style.

Results must be stored in the database and easily accessible from internal management server and from within web sites that use the module.

Participants must be able to track down their results and keep track of the test completed. Each test should be able to be linked to a particular content of a part of the web site, i.e. article, conference, a particular page.

All management and administration must be done through web interface that can be operated by a non IT expert personnel and should not require any knowledge of programming or HTML

This module must be integrated into existing management server.
